VaR Risk Report

Untitled Portfolio

Total Value: $10.00M Positions: 7 Confidence: 99% Horizon: 1d Generated: 2026-06-17

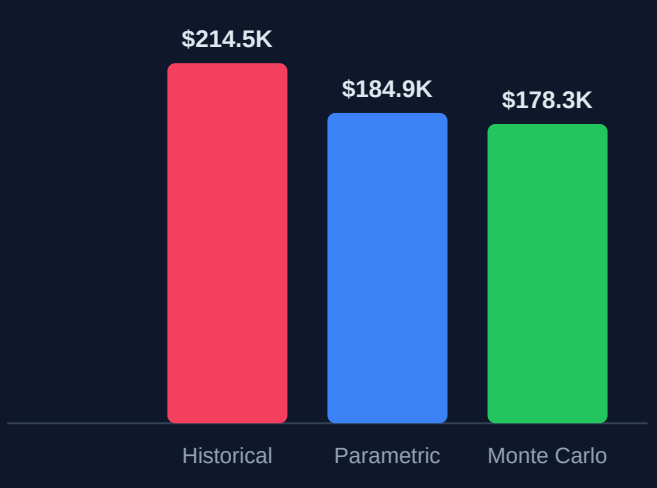

VALUE AT RISK	EXPECTED SHORTFALL	REGULATORY CAPITAL	WORST STRESS
$214.5K	$302.7K	$1.15M	-$2.03M
2.15% of book	ES/VaR 1.41x	11.5% of book	Lehman Collapse (Sep 2008)

Portfolio Holdings

SYMBOL	NAME	WEIGHT	MARKET VALUE
EURUSD=X	EUR/USD	24.7%	$2.47M
TLT	iShares 20+ Year Treasury Bond ETF	20.9%	$2.09M
AAPL	Apple Inc.	19.1%	$1.91M
BTC-USD	Bitcoin USD	15.6%	$1.56M
XOM	Exxon Mobil Corporation	13.6%	$1.36M
SPY	State Street SPDR S&P 500 ETF Trust	3.2%	$319.0K
GLD	SPDR Gold Shares	2.9%	$292.2K

VaR Methodology Comparison

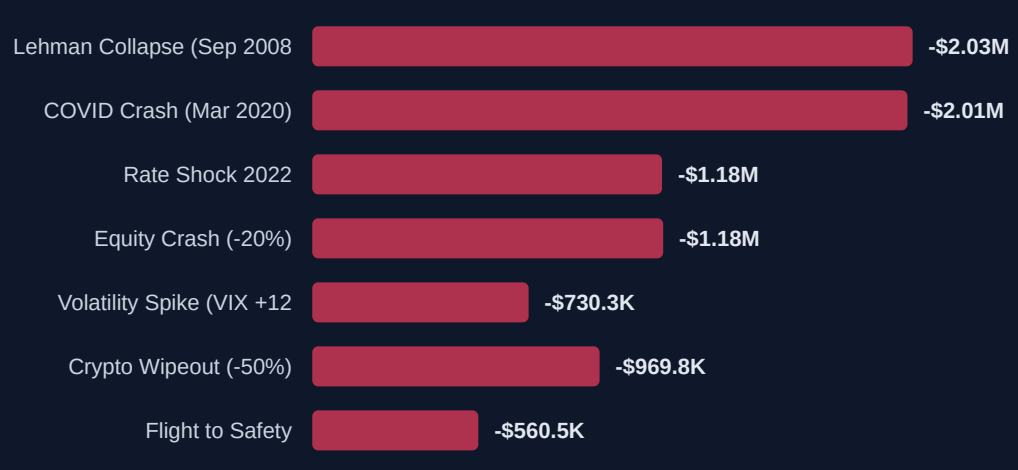

99% confidence · 1d horizon · 3 methods selected

METHOD	VAR	ES	ES/VAR	WORST
Historical	$214.5K	$302.7K	1.41x	-$513.3K
Parametric	$184.9K	$216.8K	1.17x	-$361.3K
Monte Carlo	$178.3K	$208.8K	1.17x	-$319.0K

Stress Testing

7/7 scenarios breach the 99% VaR

Risk Decomposition

Component VaR by asset — how each position contributes to total risk

ASSET	COMPONENT VAR	SHARE	INCREMENTAL	STANDALONE
BTC-USD	$84.1K	46.5%	$43.3K	$114.7K
AAPL	$58.2K	32.2%	$30.7K	$84.0K
XOM	$20.0K	11.1%	-$14.5K	$51.1K
TLT	$7.5K	4.2%	-$35.1K	$40.5K
SPY	$5.8K	3.2%	-$1.4K	$8.1K
EURUSD=X	$2.7K	1.5%	-$102.5K	$27.5K
GLD	$2.3K	1.3%	-$14.3K	$10.1K

AI Interpretation & Analysis

LLM-powered portfolio assessment

Strengths

- Diversification across asset classes including currencies (EURUSD), bonds (TLT), equities (AAPL, XOM), and cryptocurrencies (BTC-USD)
- Strong backtest performance with only 1 exception in the green zone, indicating model reliability
- Multiple VaR methodologies (parametric, historical, Monte Carlo, filtered, EVT) provide comprehensive risk assessment

Risk Concerns

- Significant stress test breaches across all scenarios, with maximum loss of $2.03M during Lehman Collapse simulation
- High concentration risk with top 5 positions accounting for 93.9% of total portfolio value
- Exposure to volatile assets like BTC-USD (15.6%) creates significant tail risk potential
- All stress test scenarios result in breaches, indicating insufficient capital buffers

Recommendations

- Reduce concentration risk by diversifying beyond the top 5 positions to mitigate single-asset volatility
- Increase capital buffers to withstand stress scenarios, particularly for the $2M+ potential losses identified
- Rebalance portfolio to reduce cryptocurrency exposure and increase allocation to less volatile assets
- Implement dynamic hedging strategies for extreme market conditions based on stress test results

Executive Summary

The portfolio shows good diversification across asset classes and reliable VaR modeling but faces significant concentration risk and insufficient capital buffers for extreme market scenarios. Immediate rebalancing and increased capital reserves are recommended to address these vulnerabilities.
